

# Project & Image Production Update

A launch-readiness summary and a clear view of the controlled system being built to produce faithful, consistent imagery across the full product catalog.

JULY 2026

The objective is not simply to generate attractive images.

It is to build a dependable catalog system in which every product appears to have been photographed in the same premium studio while remaining faithful to the actual SKU.

**2,247**

**BOTTLE SKUS**

Approved launch catalog target described in this update.

**2 lanes**

**PHYSICAL STATES**

Independent cap-on and cap-off sidecar production.

**4,493**

**STUDIO PSD FILES**

Original professional archive audited and reconciled.

**2080 x 2288**

**NATIVE MASTER**

One shared Bone-canvas production standard.

**Built foundation. Controlled image architecture. A practical route to launch.**

Prepared for Abbas - from Abdul Jalil / Jordan Richter, ASALA

# The platform foundation is built

The remaining website work is launch completion and verification — not construction.

## BUILT & HEALTHY

- **Headless storefront**, homepage, catalog, and product-detail framework
- **Sanity CMS**, search and discovery, cart, and Shopify checkout handoff
- **Grace AI**, built and tested, with fitment and guided product tools
- Quote and sample flows, PDF catalog tools, customer portal, and internal operations
- SEO and analytics foundations with automated content-accuracy checks
- Unsupported claims removed, including unverified manufacturing and origin language

**Bottom line:** a substantial and valuable platform exists today. Launch readiness now depends on closing integrations, data alignment, testing, and transfer.

## LAUNCH-CRITICAL CLOSURE

- Verify product and inventory synchronization plus the full production checkout path
- Integrate tax-exempt automation after the **TaxJar vs. Avalara** decision
- Connect **FedEx weight-based shipping** after carrier-account access
- Run Grace's final alignment pass against the locked launch catalog
- Connect GA4, Meta Pixel, and production error monitoring
- Complete final testing, training, documentation, and ownership transfer

**Formally deferred:** Paper Doll moves to a later phase. Expanded image production, voice capabilities, and portal enhancements remain valuable but do not replace open SOW items.

# The hard part is repeatability, not one beautiful image

A catalog system must preserve the exact physical product across thousands of jobs and two product states.

## THE SCALE OF THE PROBLEM

### A one-off AI bottle image can take minutes.

The real requirement is roughly **4,500 faithful catalog images**: cap-on and cap-off states across 2,247 SKUs, with no invented cap, altered sprayer, missing dip tube, resized bottle, or inconsistent thumbnail placement.

**Earlier:** the model was asked to preserve identity, improve materials, set the canvas, position the cap, create the background, and cast the shadow in one step.

**Now:** those responsibilities are separated into deterministic controls with a quality gate before approval.

## WHAT THE SYSTEM NOW CONTROLS

01

### Canonical measurements

Body height, width, assembled height, and capacity are reconciled in millimeters.

02

### Geometry contract

Each bottle receives a computed body box, center line, and shared baseline.

03

### Independent lanes

Cap-on and cap-off run only from their own approved byte-locked references.

04

### Material-only improvement

AI may improve glass, lighting, Bone background, highlights, and restrained shadow.

05

### Quality gate

A visually attractive result is rejected when the physical product is wrong.

**Result:** visual improvement without changing the product.

# Two lanes that never touch

Cap-on and cap-off are separate physical states — each lane runs only from its own approved, byte-locked reference.

## CAP-ON LANE

✗ ONE STATE IS NEVER INFERRED FROM THE OTHER

"imagine the cap off" invents internals that don't exist — so it is forbidden

## CAP-OFF SIDECAR LANE

If the reference bytes handed to the generator do not hash-match the approved fingerprint, generation refuses to run — nobody, including us, can quietly swap a reference. · Best Bottles × Madison Studio, 2026

# Identity is untouchable — only material can improve

Every pixel belongs to one of two layers. One is locked to the approved reference; the other is the only place the AI adds value.

## IDENTITY LAYER

locked · comes only from the approved reference

### Bottle shape & proportions

the glass body itself

### Sprayer & collar

the fitment on the neck

### Spring & dip tube

internal hardware, visible through glass

### Cap

exact style and color, standing beside

### Component count & state

nothing added, nothing removed

## ✦ MATERIAL LAYER

the only layer the AI may improve

### Glass depth & clarity

thickness, curvature, transparency

### Reflections & highlights

premium studio glasswork

### Studio lighting

consistent across the whole catalog

### Bone background

the standard #F5F3EF studio wall

### Contact shadow

restrained, on the shared baseline

The material layer may change how the product is photographed —  
never what the product is.

Best Bottles × Madison Studio, 2026 · identity layer bound to the byte-locked reference; violations are rejected at the quality gate

# The quality gate rejects pretty-but-wrong

Every generated result is checked against its product and geometry contract before approval. Attractive is not the bar — correct is.

## AUTOMATIC REJECTION IF THE RESULT...

- ✗ Changes the bottle proportions
- ✗ Misses the shared baseline
- ✗ Alters the fitment or collar
- ✗ Changes the cap
- ✗ Loses internal hardware (spring, dip tube)
- ✗ Introduces components that don't exist

## CASE STUDY · the 3 mL pilot rejection

### GEOMETRY: PASSED

the bottle entered its assigned height box

### IDENTITY: FAILED

glass too narrow against the sprayer collar; spring and dip tube replaced by the model

Verdict: rejected before it could ever reach the site.

A geometry pass alone is not approval — the product must be the correct product. That rejection is the system working.

**REJECTED**

# A staged, measurable route to launch

Website closure and premium image production advance as two coordinated tracks.

## STATUS REPORTED IN THIS UPDATE

60%

CYLINDER REFERENCES FULLY VERIFIED

Largest family moved from unverified to majority coverage in one day.

6 sizes

DUAL-LANE VALIDATION SET

3, 5, 9, 25, 50, and 100 mL references available in both states.

~1,000

ARCHIVE PHOTOS IDENTITY-MATCHED

Professional product photography recovered from descriptive filenames.

### TRACK 1 - WEBSITE LAUNCH

|           |                                                 |
|-----------|-------------------------------------------------|
| Week 1    | Decisions, access, and launch SKU list          |
| Weeks 1-3 | Product/inventory sync and production checkout  |
| Weeks 2-4 | Tax-exempt and FedEx integrations               |
| Weeks 3-4 | Grace alignment, analytics, and monitoring      |
| Weeks 5-6 | Testing, training, ownership transfer, approval |

### TRACK 2 - IMAGE CATALOG

- Days 1-3: six-size Cylinder validation
- Days 1-10: Cylinder, Elegant, Diva - 899 SKUs
- Days 10-17: Circle, Sleek, Round, Slim - 725 SKUs
- Days 17-24: remaining families - approximately 620 SKUs
